

Silverstripe Search

Finding your content just got a lot smoother

Effective information retrieval is the cornerstone of success for any content specialist. Silverstripe Search helps you deliver relevant search results, fast. And it's packed with features that help your content team fine-tune results

More than a powerful platform

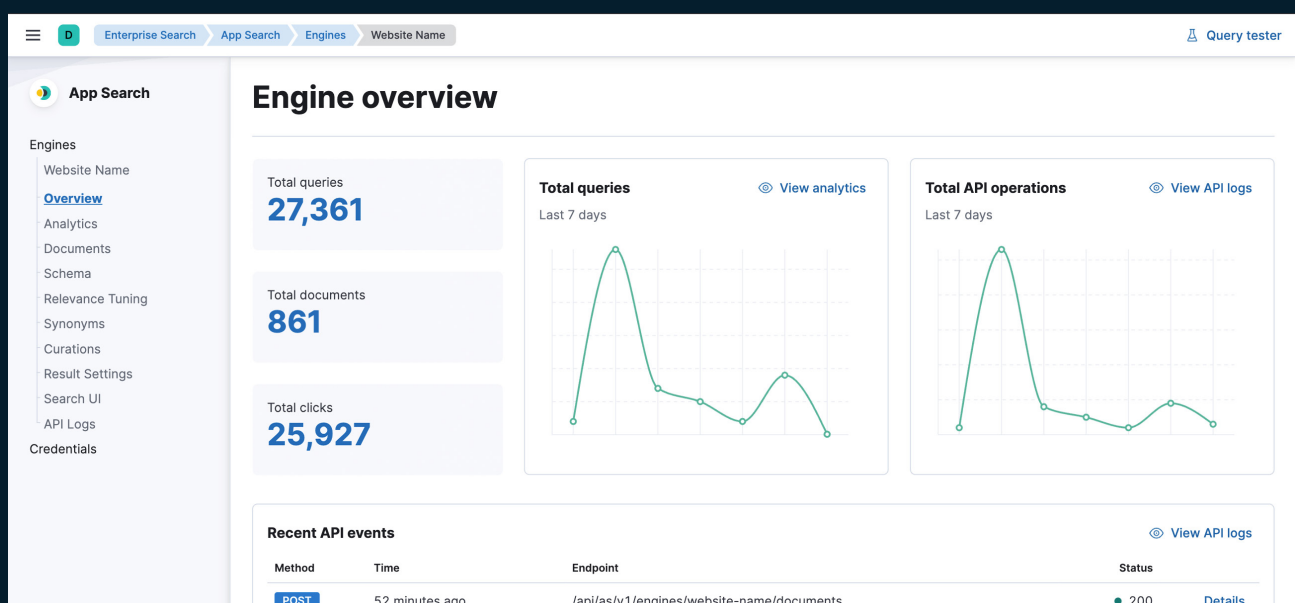

Silverstripe Search is more than just an advanced platform. Driven by Elasticsearch and fully managed by our team, it offers reliability and performance. Unlike off-the-shelf options, you have our undivided support without the need for dedicated development staff.

Our partnership with Elastic enhances the Silverstripe Search, pairing an advanced search and analytics engine with the reliability and availability that you can expect from all of Silverstripe's services. This collaboration brings cutting-edge technology and expertise to our platform, ensuring seamless, scalable, and fully managed search solutions tailored to your needs.

Fine-tuning for better content

Silverstripe Search helps you fine-tune search results, making content discovery effortless for users. Your end-users quickly find what they need, and their interactions provide valuable data to improve future search results.

Analyst plans and above give you access to Elastic's dashboard, which displays an interactive visualisation of your Elasticsearch data. You know what your users are doing and what you can change to help them. With an easy-to-use interface, you get real-time, actionable insights, empowering you to create content that sets you apart from the competition.

Feature highlights

Each of our plans offers different features and capabilities. You can take advantage of the full suite of tools and support, or choose to self-serve your data.

If you have more complex requirements, our Architect plan has you covered. It includes federated search to find results from various sources and single tenancy for those needing dedicated isolation for security compliance.

Here are some of our favourite features:

Fully managed: we handle the technical side, so you can focus on providing a great user experience

Analytics: see exactly how your customers find content on your site using the analytics dashboard, and use those insights to curate content for better search experiences

Safe and secure: you get reliable, fault-tolerant infrastructure with 24/7 support and ISO27001K security certification for peace of mind

Te reo macron recognition: ensure a consistent experience for Te Reo Māori speakers

Analyst plans and above:

Synonyms: step-up search recall with similar term recognition for precise results and no missed opportunities

PDF/DOCX indexing: easily search and retrieve document contents

Pricing and plans

Our pricing plans allow you to tailor your service to your needs and budget. Fixed-price plans ensure transparent and dependable pricing with no surprises—just consistently reliable search solutions.

		BASIC	ANALYST	ARCHITECT
Pricing	Per month NZD ¹	\$350	\$600	\$2,500
Infrastructure	Tenancy	Shared	Shared	Dedicated
Volumes	Indices	1	1	30
	Storage	500 MB	500 MB	15 GB
	Requests ²	50k	50k	2 million
Features	Customisable index fields	✓	✓	✓
	Front-end Search UI ³	✓	✓	✓
	Te Reo macron recognition	✓	✓	✓
	Customisable search fields	✓	✓	✓
	Customisable results fields	✓	✓	✓
	Search term highlighting	✓	✓	✓
